HOW WE WORK

DND IBERICA

Technical solutions coordinated from Barcelona to support packaging and brand-protection projects in Spain and international markets.

WHO WE ARE

From a technical requirement to a viable solution.

DND Iberica combines specialist expertise, local coordination and an international manufacturing network to develop solutions adapted to the product, package and production process.

Before defining a proposal, we analyse materials, formats, line compatibility, expected volume and destination market.

01

Security

Quality, package integrity and brand protection.

02

Agility

Clear answers and efficient project coordination.

03

Service

Technical support and direct communication at every stage.

PRODUCT AREAS

Four areas. One consistent way of working.

01

DOYPACK

FLEXIBLE PACKAGING

A lightweight, stable and versatile solution that strengthens product presentation at the point of sale.

02

SEALING LINERS

HERMETIC SEALING

Technical sealing liners designed to protect the contents and reinforce package integrity.

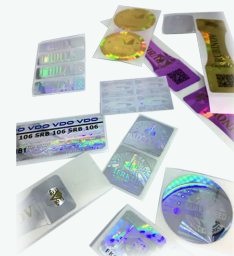

03

SHRINK SLEEVES

HIGH-IMPACT LABELLING

Full-wrap coverage and a large communication surface that differentiates products on the shelf.

04

HOLOGRAMS

BRAND PROTECTION

Authentication, traceability and premium presentation in a customised security solution.

HOLOGRAMS WITH QR CODE

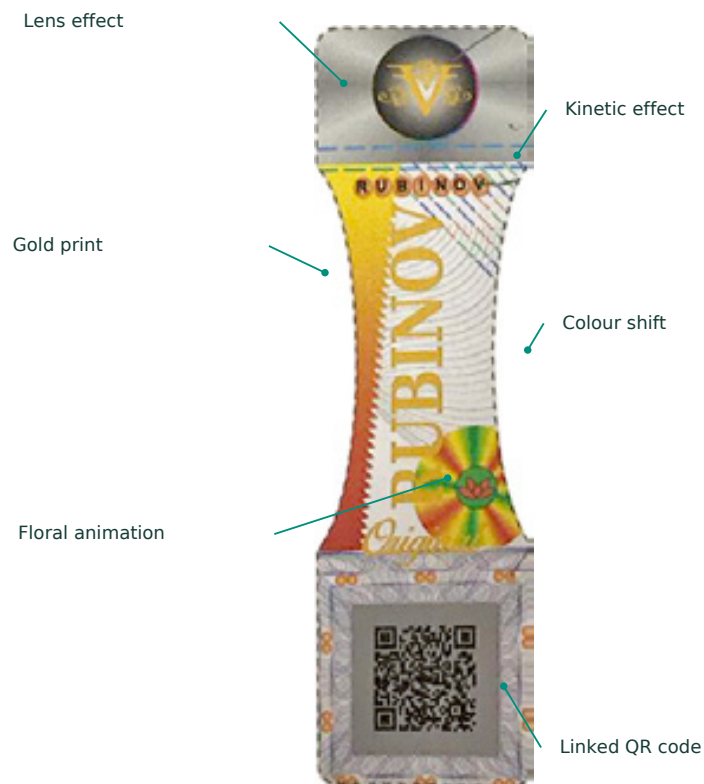

Holograms with a QR code combine visual authentication and digital connectivity in a single security feature.

The code can store a web address and other information readable by a phone or inspection device.

Once scanned, it can provide access to product content, instructions, campaigns or brand-defined verification systems.

It can also support loyalty programmes, traceability and an additional authenticity check.

SECURITY FEATURES

Illustrative technical example of a QR hologram.

BRAND PROTECTION

Visible authenticity. Security that is hard to copy.

WHAT A HOLOGRAM DELIVERS

- Protection against copying and misuse.
- Enhanced presentation and perceived quality.
- Integration of logo and visual identity.
- Numbering, QR codes and Track & Trace solutions.
- Visible evidence of opening or tampering.
- Rapid verification by distributors or consumers.

SOLUTION TYPES

- | | |
|-----------------------------|-------------------------|
| 01 Customised hologram | 02 Universal hologram |
| 03 Scratch-and-win | 04 High-security E-Beam |
| 05 Hologram with QR code | 06 Track & Trace |
| 07 Tax stamps | 08 Hot-stamping foil |
| 09 Blister-pack strip | 10 Security labels |
| 11 Pharmaceutical solutions | 12 Windscreen stickers |

ORIGINATION TECHNIQUES

Technology adapted to the required security

2D/3D

Two-dimensional layers that produce depth and differentiated reflections.

3D

Objects or images reproduced with depth and a perception that changes with the viewing angle.

DOT-MATRIX

Precisely aligned diffraction gratings that deliver sharpness, colour and kinetic effects.

E-BEAM

Electron-beam-generated microstructures for high-security applications.

TRACEABILITY AND CONTROL

Numbering, QR and Track & Trace.

Variable identification can connect each element to specific product information, loyalty campaigns or tracking systems. It also strengthens authenticity verification and incident management.

SHRINK SLEEVE LABELS

A shrink sleeve turns the container into a wrap-around visual surface and communicates the brand from virtually every angle.

It adapts to complex geometries and can cover the entire product or a specific area, including the closure.

Printing, coding and security features can be integrated into a single solution.

360° COVERAGE

Visual impact, identification and protection.

01

Materials

- PVC
- PET
- Structures adapted to the application

02

Numbering and coding

- UV marking
- Thermal, laser or inkjet printing
- 2D and QR codes

03

Label types

- Printed sleeves
- Sleeves with holographic strip
- Solutions with integrated security

04

Protection features

- Holographic strip or surface
- Thermochromic inks
- Reactive or colour-changing inks

HERMETIC SEALING

02

SEALING LINERS

Our range includes induction liners, pressure-sensitive liners, EPE liners and other structures selected for the application.

Induction sealing is one available solution: a non-contact process that hermetically seals plastic or glass containers after the cap has been applied.

Each structure is defined according to the container, product, closure, filling line and expected behaviour during transport and use.

HOW IT WORKS

A technical seal defined for each container.

01

Closure

The liner is placed inside the cap and the container is closed.

02

Induction

The coil generates an electromagnetic field that heats the aluminium.

03

Activation

The sealing layer activates and contacts the container neck.

04

Cooling

The polymer forms a strong, hermetic bond with the container.

INDICATIVE MULTILAYER STRUCTURE

Pulp or foam

01

Wax or bonding layer

02

Aluminium

03

Sealing polymer

04

The final structure may vary. It is selected according to the container material, contents, cap type and line parameters.

SOLUTION RANGE

Package integrity starts at the closure.

AVAILABLE SOLUTIONS

- Printed or holographic induction liners.
- EPE-ALU: foam and aluminium.
- CRT-ALU: board and aluminium.
- Pull Tab opening liner.
- EPE liner for hermetic closure.
- PS pressure-sensitive liner.
- Liners with safety valve.
- Options for different polymers and glass.

PROJECT CRITERIA

We analyse the container neck, material, contents, closure, sealing temperature and expected behaviour during transport, storage and opening.

APPLICATIONS**Food****Pharmaceuticals****Industry****Agriculture****Beverages****Cosmetics****Oils and lubricants**

FLEXIBLE PACKAGING

01

DOYPACK

A Doypack pouch incorporates a base designed to remain upright and support effective retail display.

It can be used for solid, liquid or powdered products. The structure is selected according to shelf-life, strength and barrier requirements.

Printing can cover virtually the entire surface, while the closure can use a spout, ZIP or an easy-open seal.

FLEXIBLE PACKAGING

A lightweight format with strong brand presence.

01

Formats

- With spout
- With ZIP
- Kraft Doypack
- Sealed easy-open pouch

02

Features

- Capacities up to 5 litres
- Hermetic closure
- Duplex and triplex structures
- Aluminium-barrier options

03

Customisation

- Matt printing
- Transparent window
- Aroma-preservation valve
- Custom dimensions and shapes

04

Applications

- Food and beverages
- Cosmetics
- Oils and lubricants
- Pharmaceutical and agricultural products

FROM ANALYSIS TO SUPPLY

A clear process designed to reduce uncertainty.

APPLICATION AREAS

Solutions for different industries and formats.
